Test Procedure

❖ Measurement System Diagram

❖ Spectrum Analyzer Conditions

Put spectrum analyzer frequency span wide enough to capture the complete power envelope, including all sidebands. Using the marker of the spectrum analyzer, find the lowest frequency and highest frequency of the equipment under test.

If the EUT can't set at un-modulation mode, measure the 10dBc center frequency.

INTERFERENCE PREVENTION FUNCTION

Requirement

The EUT shall have the interference prevention capability to transmit or to receive the identification automatically, so that sender and receiver shall exclude other equipment.

Test Procedure

In the case that the EUT has the function of automatically transmitting the identification code:

1. Transmit the predetermined identification codes from EUT
2. Check the transmitted identification codes with the demodulator.

In the case of receiving the identification codes:

1. Transmit the predetermined identification codes from the counterpart.
2. Check if communication is normal
3. Transmit the signal other than predetermined ID codes from the counterpart.
4. Check if the EUT stops the transmission, or if it displays that identification codes are different from the predetermined ones.

Test Data

Environmental Conditions

Temperature:	23.6 °C
Relative Humidity:	37 %
ATM Pressure:	101.9 kPa

The testing was performed by Tyler Pan and Vern Shen on 2019-12-12.

Test Result: Compliance

CONSTRUCTION PROTECTION CONFIRMATION

Limit

The high-frequency section and modulation section of the radio equipment except for the antenna system shall not be capable of being opened easily.

Confirmation Method

The EUT was locked by special screw, so the EUT can't be opened easily. Please refer the EUT photo.
