Section 412 – International Market Surveillance Issues

www.bundesnetzagentur.de

- The COVID-19 pandemic affected the Bundesnetzagentur's market surveillance in 2020.
- As of March 2020, regional service operations were temporarily either fully suspended or were only possible to a very limited extent.
- Regional offices limited or suspended "on-site" inspections and products to be checked were procured by other means where possible (letter, e-mail, telephone)
- Comprehensive hygiene and social distancing rules ensured the necessary operations could be carried out on-site
- Checks were delayed due to social distancing and hygiene rules
- For this reason, the results can only be compared with those of previous years to a limited extent

Stay safe!!!

-  On-site market surveillance
-  Online market surveillance
-  Cooperation with customs
-  EU campaigns and test purchases
-  Summary and outlook

On-site market surveillance

- 1,156 products with regard to EMC (58% less than 2019)
- Proportion of non-compliant products: 44% (2019=21.5%)

* Some products failed to meet both requirements

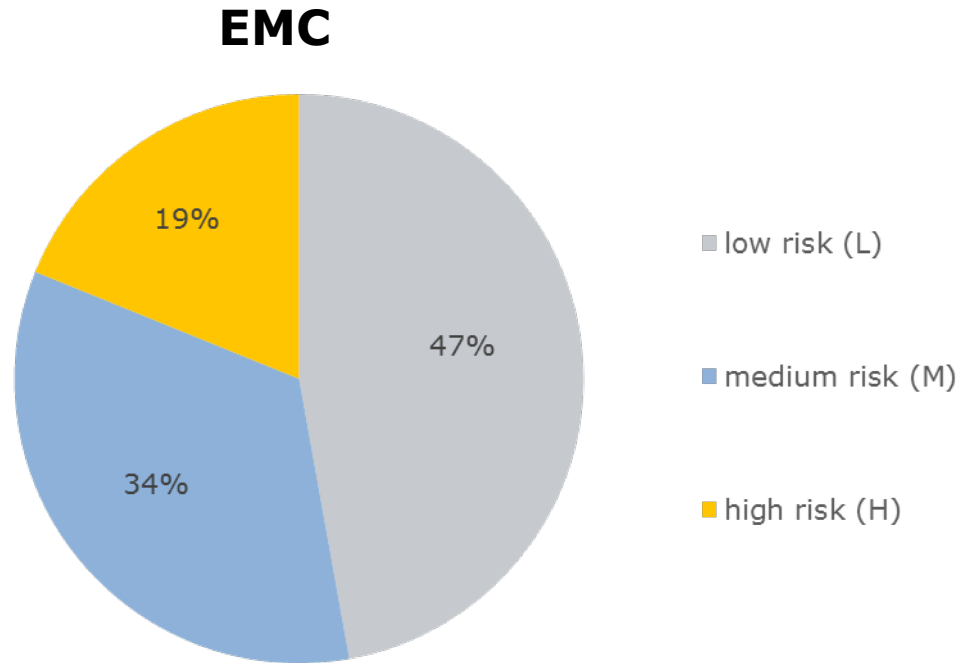

- 1,546 products with regard to RED (42% less than 2019)
- Proportion of non-compliant products: 60% (2019=48.2%)

* Some products failed to meet both requirements

Risk assessment for EMC products that have undergone technical checks for non-compliance

Risk assessment for RED products that have undergone technical checks for non-compliance (product safety only)

RED

65 products were found to have safety deficiencies **at Kolberg test laboratory**^{*1} and at the **external laboratory**.

^{*1} At present, it is not possible to carry out a full technical test for device safety.

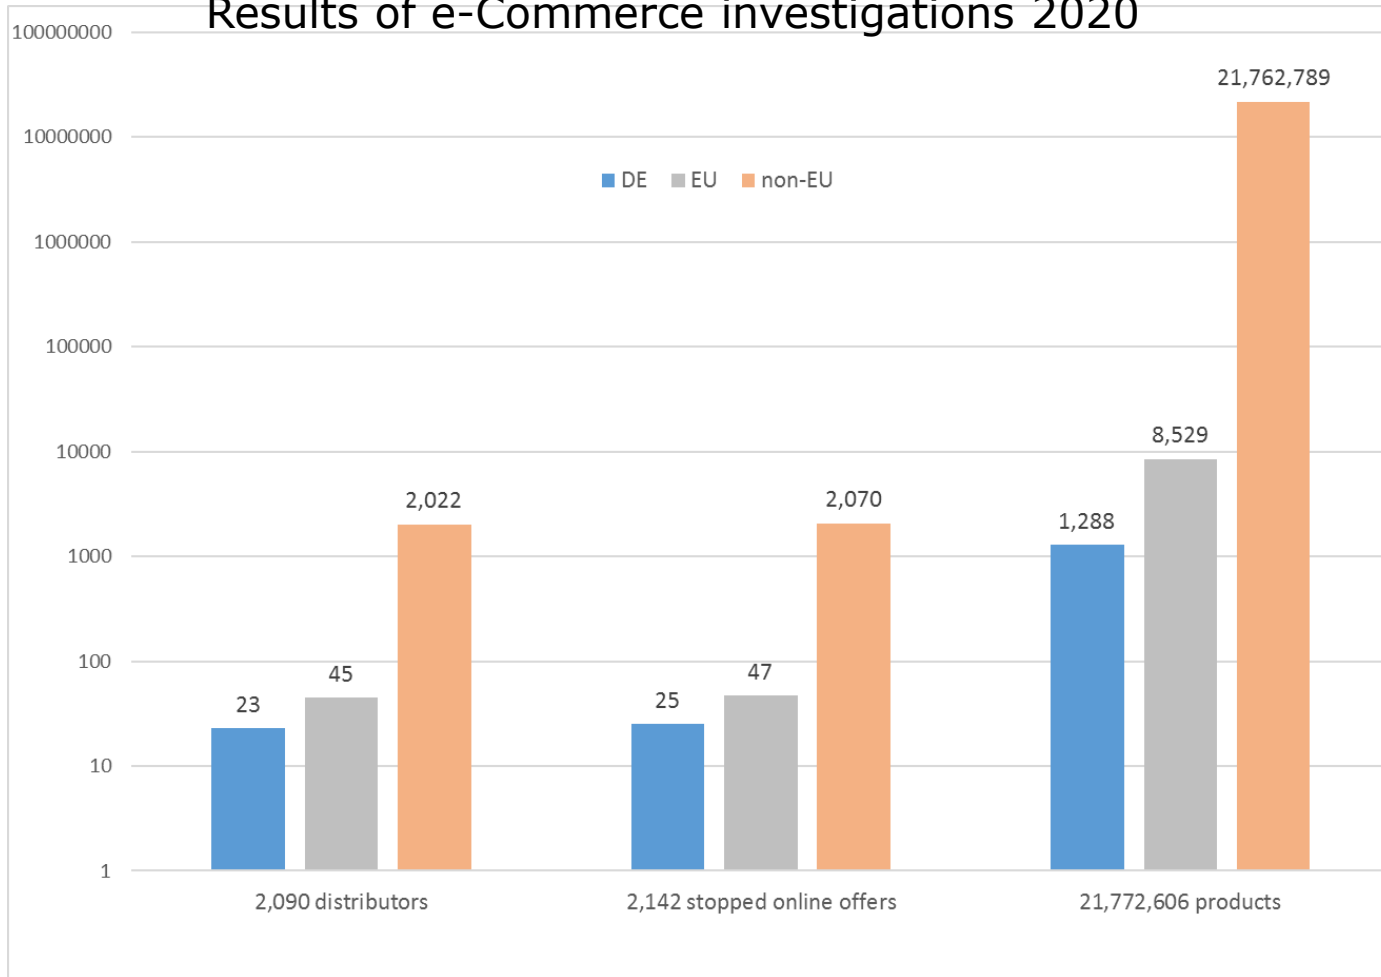

Online market surveillance

Results of e-Commerce investigations 2020

Online market surveillance

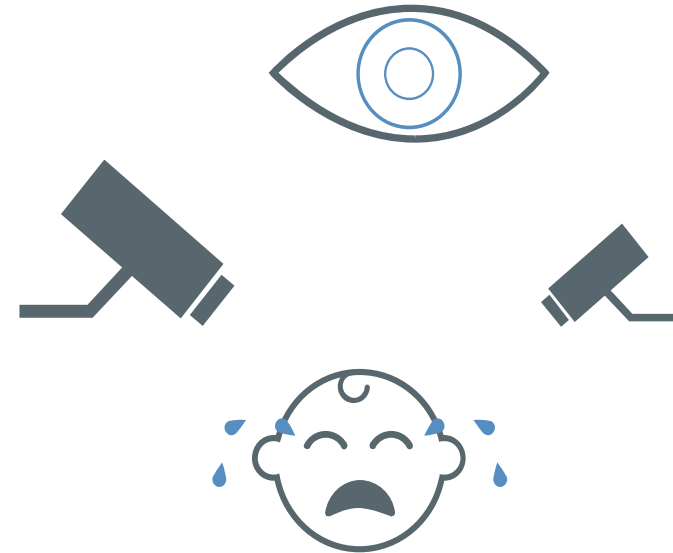

Overview of other banned products types 2020

Example: Baby monitor

- Formal requirements not or only partially met
- Missing operating instructions in German

Example: Mini anti-spy detector/bug finder

- Formal requirements not or only partially met
- No German operating instructions supplied
- No power supply unit for Germany

Example: Walkie talkie

- Existing sales ban due to possible interference
- Device also non-compliant in other countries and subject to measures

Cooperation with customs

- 8,832 suspicious shipments reported (32% less than 2019)
- Total number of products reported: 204,000 (55% less than in 2019)
- 96% of the suspicious shipments (91% in 2019) were not given clearance for the European market

Reasons why fewer suspicious shipments were reported

- Customs' focus in 2020 shifted increasingly to checking PPE as a result of COVID-19
- Customs staffing was halved leading to customs officials working different shifts
- Customs issued clearance for more products overall in 2020 owing to a lack of resources
- Forwarding to "inland customs" was limited for capacity-related reasons

The situation is expected to return to normal in 2021

Examples of suspicious shipments flagged by customs

EU campaigns and test purchases

- The Administrative Cooperation group for European EMC Market Surveillance Authorities (AdCo) launched a joint campaign in 2020
- Target of the campaign: microwave ovens

- Report expected to be published in summer 2021

- AdCo for the Radio Equipment Directive (RED)
- Target of the campaign: Professional Mobile Radio (PMR)
 - 16 national market surveillance authorities formally inspected 86 products
 - This campaign was also delayed because of COVID-19; no final report is available yet

Test purchases in support of market surveillance activities

- The Bundesnetzagentur performs online test purchases to support the eCommerce and market surveillance activities at regional offices
- In 2020, a total of 63 test purchases were made (25 EMC, 38 radio systems)
- In 25 cases, test purchases were not possible

Test purchases carried out

- Out of 63 online test purchases carried out, 38 devices were delivered that subsequently underwent formal and/or technical checks
- 7 devices were deemed compliant following formal tests (18%)
- 31 devices had formal and/or technical defects (82%)
- 23 devices flagged by online market surveillance were blocked on the internet platform selling them

Example of test purchases

Video camera

Remote-controlled truck

Smart home alarm system

EMP jammer

Drone

Radar detector

Summary and outlook

- 772 market-restricting measures (excl. customs and Internet)
EMC:11 sales bans, 253 deficiency letters
RED:20 sales bans, 488 deficiency letters
 - Number of non-compliant products facing market restrictive measures from
 - On-site market surveillance 0.51 million
 - Online market surveillance 21.77 million
 - Cooperation with customs authorities 0.20 million
-
- Total: **22.48 million**

- Implementation of the new requirements set out in the Market Surveillance Regulation (EU) 2019/1020 by July 2021
 - Specifically Article 4 of the Regulation regarding a designated economic operator in the EU (new fulfillment service provider) for 18 product sectors (Articles 4.5)
 - Adoption of the German Market Surveillance Act (Marktüberwachungsgesetz) (cabinet 10.02.2021)
- Effects of BREXIT on market surveillance
- Development of a market surveillance app for citizens and companies (initially for the EMC and radio product sectors with the aim of expanding to all product sectors)
- Assist GIZ^{*1} with the publication about the German/European quality infrastructure system within the framework of the GPQI project implemented by the Federal Ministry for Economic Affairs and Energy (BMWi)

*1 Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH

- Participate in market surveillance campaigns for EMC and radio
 - USB chargers, prefabricated connector (cable) study, Internet of Things (IoT) in cooperation with customs authorities and Specific Absorption Rate (SAR)
- Assist with the development (DK) and operation of a research tool using "Artificial Intelligence" (AI) in online market surveillance
- Cybersecurity; contribute to the drafting of a delegated act on the Article 3(3) RED
 - d) Misuse of network resources,
 - e) User privacy, and
 - f) Fraud protection
- Further information is available in the BNetzA 2021 project plan
